

# Transportation and Logistics Case Study

## Client Testimonial

"We needed high-value Testing solutions that would support our needs and be easy to deploy our transportation solutions. My client, STC is the only company that offers advanced Testing services that enhance the quality of our solutions much faster than expected. I would recommend STC ThirdEye to any company requiring testing solutions for their transportation and logistic software."

-Head Solutions (ISV)

## Client Profile

Our client is a leading full-service contract logistics company that uses advanced management systems to integrate and simplify complex logistics operations globally, including order fulfillment, transportation, storage and distribution.

## The Challenges

Businesses have become very competitive so quick efficient and flexible solutions are needed in order to stay ahead. Good Logistic testing solution not only brings substantial saving but also drives companies to the top slot.

## Customer's Need

Our Customer was unable to solve many of their challenges and meet their goals by utilizing Logistics Solution. The logistics and transportation industry is spearheading collaborative applications, supply-chain management and e-commerce. Making the supply chain more efficient and driving down inventory and shipment costs are top priorities among logistics and transportation companies as diminishing shipments and rising fuel costs cut into revenues. The client required a comprehensive IT testing solution provider, which could ensure the various business processes and operations to implement and integrate a Shipment Management system to its global customers.

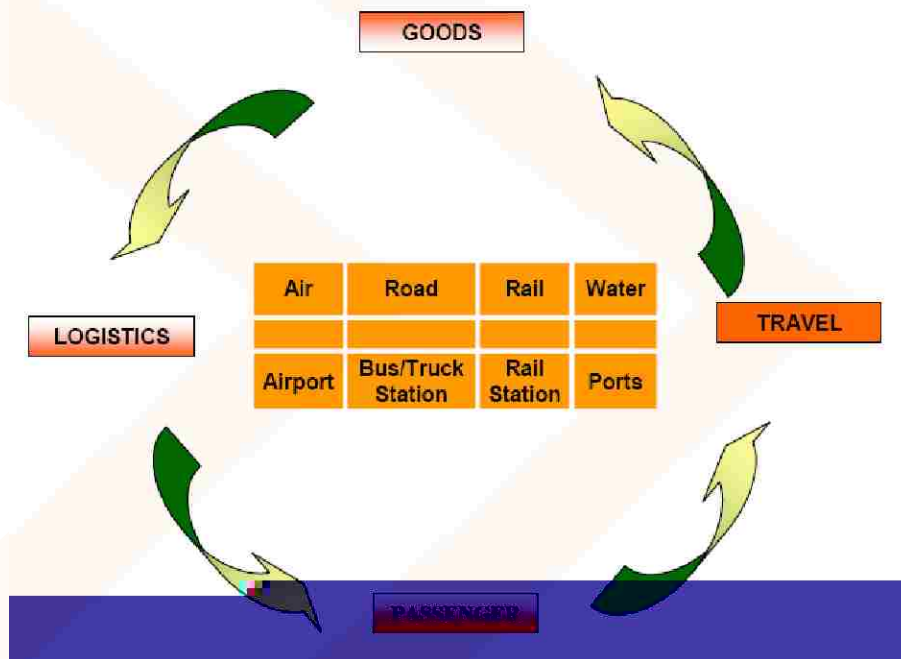

## Solution

STC used a well-defined Software Testing Life Cycle (STLC) model, which takes an iterative approach in executing a project. Each build / milestone is scheduled so that obtaining specific requirements related to the revision of project documents; planning, thorough testing and bug identification are carried out incrementally. One of the team members are signed the role of SME (Subject Matter Expert) to review and update requirement documents, organize testing activities and conduct regular reviews and walkthroughs. Designated team members work in tandem with the Test Manager, as members of the testing team, continuously aim to enhance the quality of the software.

## Benefits

- More Efficient Operations With better visibility to make sure customers receive service where and when they need it.
- Higher on-time delivery ratios and improved customer service as a result of proactive identification of potential logistics issues
- Increases visibility of Key business operation.
- Enhances Customer Service and Customer Responsiveness
- Maximize efficiency to deliver on time, with in budget
- Increase in ROI
